

A SHELF OF YOUR OWN

Ways to put earned collectibles on Today without them shouting over the list. First what a single item sits in, then where the display lives on the page, then how you arrange and hide it.

★ The blobs are stand-ins for your drawings — shape and colour only, so you can judge size, spacing and density.

♦ WHAT ONE ITEM SITS IN the container decides how much noise 12 of them make

1a Specimen jars

Cosiest, most goblincore — but a jar is ~40% chrome, so 12 of them eat a lot of page.

1b Shelf ledge

One thin ledge holds a whole row — cheapest chrome per item, and it stacks into shelves nicely.

1c Bare stickers

Die-cut white edge, slight tilt, allowed to overlap. No furniture at all — the art is the whole thing.

1d Pinned case

Very tidy, very collector. But the grid reads as a checklist — empty cells start to feel like homework.

1e Retro window

Fits Wren's 90s wink and comes with a free close button — but window chrome next to the day list reads as an app, not a shelf.

◆ **WHERE THE DISPLAY LIVES** same twelve items, three relationships to the list

1f Shelf column beside the list recommended

Shelves stack downward as you collect, so the column grows with you instead of getting denser. It never crosses the list's own column — the tasks stay the loudest thing on the page.

1g Backdrop layer

At twelve the backdrop is unmistakably yours — but the art is cropped, dimmed and half-hidden, a shame for drawings this detailed. Better as a seasonal wallpaper than as the collection display.

1h Margins, free placement

Full sticker-book energy and the art stays whole. Six per margin is about all that fits before items start colliding with the list — and on narrow windows the margins vanish entirely, so it needs a fallback: probably collapsing to 1f.

◆ ARRANGING, SWAPPING, HIDING interactive in the live version

1i Slots on a shelf tidy by default

Four slots per shelf, evenly spaced, nothing can look wrong. Drag between slots to reorder; tap an empty one to pick from your collection. Empty slots only show while you're editing.

1j Free placement

Drag anywhere, overlap allowed, click one to enlarge it. Maximum ownership — and maximum chance of a mess, which is arguably the point of goblincore.

1k One switch to clear the room

A single boolean on the user record — no per-item hiding, no confirm dialog. Toggling off leaves the day list exactly where it was.

1l Tap one: enlarge or swap

Same sheet does enlarging, swapping and removing, so a single tap is never ambiguous. "Swap this spot" opens the collection filtered to whatever fits.

◆ WITH YOUR REAL ART size check against the live sketch

Art wants a transparent background and a consistent internal margin — otherwise items with tight crops read as bigger than the rest. A shared square canvas per drawing solves it before it becomes a layout problem.
